spark + vitK

Anti-inflammatory cream and pre- and post-treatment haematomas.

Localized action cream with vitamin K and centella asiatica that helps prevent and reduce bruises and redness after aesthetic treatments such as injections of dermal filler (hyaluronic acid), application of threads, mesotherapy, laser or surgical interventions.

Application

Application of Spark + vit K cream as **prevention of a treatment with the possibility of hematomas**, applying it twice a day with a light massage, and prolong it after the treatment one to two weeks later.

Composition

Centella asiatica extract, aesculus hippocastanum bark extract, ruscus aculeatus root extract, phytonadione epoxide, harpagophytum procumbens root extract, arnica montana flower extract, salvia lavandulaefolia leaf oil.

CENTELLA ASIATICA (Hydrocotyle asiatica)

Among its qualities is the vasoconstrictive power it possesses, which makes it a good remedy to **improve blood circulation and thus improve the state of the legs** when we have tired, some areas more loaded ...

Another of the most characteristic properties of this plant is its anti-inflammatory power, which helps enormously that cosmetic products containing Centella Asiatica extract can alleviate the effects of **fatigue on the skin**, poor blood circulation and dull and heterogeneous tone.

HORSE CHESTNUT (Aesculus Hippocastanum Bark)

Horse chestnut is a blood circulation activator and anti-inflammatory which improves varicose veins, fluid retention, attenuates tired legs and reduces cellulite. It has moisturizing and emollient qualities which makes it an active ingredient widely used in creams for mature skin.

RUSCUS (Ruscus Aculeatus Root)

It is recommended for use in preparations for the care of feet, legs and other body areas.

According to European Council, ruscus extract also has the following cosmetological properties: **toning, refreshing, anti-irritant, astringent, vasoprotective, antiphlogistic and anti-exudative.**

VITAMIN OXIDE K (Phytonadione Epoxide)

Vitamin K - Phytonadione. It is necessary for blood coagulation, because **it produces an enzyme called prothrombin, which interferes in the production of fibrin**, which is the one that finally interferes with coagulation. Due to this reason, it prevents hematomas from forming easily.

HARPAGOFITO (Harpagophytum Procumbens Root)

The application of harpagophyte extract in cosmetics is justified by its **sedative, calming, protective and anti-radical properties**. It is used in preparations for irritated, sensitive and aged skin. It is also used in sunscreen preparations and creams for functional massages, recuperators and against joint pains.

ARNICA (Arnica Montana Flower)

Arnica is known for its calming and decongesting properties. These properties are related to sesquiterpene lactones, which are involved in several inflammatory reaction pathways.

Topical arnica relieves bruises and ecchymosis, sprains, muscle and joint pain.

SAGE OIL (Salvia Lavandulaefolia Leaf Oil)

Sage can provide your body with rosmarinic acid, a polyphenol compound with unlimited healthy potential. According to Phytochemicals, rosmarinic acid is:

Anti-carcinogen, anti-microbial and anti-inflammatory.
